

# **Women in Computing**

**Patricia Gomez**

## **Abstract**

To determine why women are under-represented in the computer field. I will attempt to show first that women are under-represented by showing statistics on class ratio of men to women in high school, junior college and university classes. I will identify some factors that lead to this under-representation by surveying co-ed high schools, City Colleges of Chicago and Northeastern Illinois University. I have designed a questionnaire to identify factors that may be contributing to this dilemma. With my results I will propose some solutions to this problem.
